      The method involves receiving television signal containing caption
      data and fetching caption data from television signal to form a
      referenced image signal and a caption data signal. The referenced
      image signal is supplied to television set and the caption data signal
      is supplied to one other screen except the television set. The caption
      data is displayed on the screen.
    - An input instruction is received with respect to selected caption data
      from user, and the selected caption data is stored. The selected
      caption data is translated and explained according to user
      instruction. Text meaning and/or translation data corresponding to the
      selected caption data stored in memory is fetched, displayed on the
      screen, and the selected caption data is translated and explained.
      (Dwg.8/8)
